

CHEMICALLY AMPLIFIED RESIST COMPOSITION AND METHOD FOR  
FORMING PATTERNED FILM USING SAME

5

ABSTRACT OF THE DISCLOSURE

10 A chemically amplified resist composition which  
comprises a base resin reacting in the presence of an  
acid, a photo acid generator generating an acid upon  
exposure, and a compound having the combination of an  
acetal moiety and a site which is eliminated by an acid  
in its molecule, or which comprises a base resin, which  
15 is a copolymer having the combination of an acetal moiety  
and a site eliminated by an acid in one repeating unit  
and reacts in the presence of an acid, and a photo acid  
generator generating an acid upon exposure.
